SUMMARY

Results-driven Software Engineer with hands-on experience designing, developing, and maintaining scalable software applications using Python, FastAPI, Django REST Framework, and React.js. Proven success collaborating with cross-functional teams to define and implement new features, while testing, debugging, and optimizing systems for performance, scalability, and reliability. Delivered 99.8% system uptime at DRDO's Integrated Test Range and consistently improved quality through automation and performance tuning. Eager to bring strong ownership and continuous improvement to a modern product engineering team.

EDUCATION

Radhakrishna Institute of Technology and Engineering B.Tech in Computer Science (74.37%)	2017 - 2021
Stewart Science College +2 in Science (52%)	2014 - 2017
S. S. V. M Tulasipur Matriculation (57%)	2013 - 2014

WORK EXPERIENCE

Apprentice Trainee — Software Developer & Automation Engineer	01/2025 - 01/2026
Integrated Test Range (ITR), DRDO Gov. Of India Chandipur, India	

- Built and maintained Python-based backend services for mission-critical enterprise applications, achieving 99.8% system uptime through robust service design and ownership of the full feature lifecycle.
- Automated UI testing protocols using Python Selenium and PyTest, reducing manual testing effort by 40% and deployment errors by 25% while improving release reliability.
- Optimized frontend/backend Python scripts to eliminate runtime bottlenecks, delivering a 35% reduction in execution time through proactive performance profiling and debugging.
- Participated in code reviews, authored technical documentation, and collaborated cross-functionally on internal software modules to identify improvements and implement new features.

PROJECTS

Cinema Seat Reservation System

- Python, Django REST Framework, React.js, TypeScript, PostgreSQL
- Architected RESTful backend endpoints with Django REST Framework to handle real-time booking transactions, seat-tier pricing logic, and data persistence in a PostgreSQL relational database.
- Built a dynamic, component-driven frontend using React.js and TypeScript with cross-device compatibility, real-time seat selection state management, and responsive UI rendering.
- Designed PostgreSQL schema with normalized tables for users, bookings, and pricing tiers, optimizing query performance for concurrent seat reservation transactions.

Digital Attendance Tracker

- Python, Django, React.js, TypeScript, PostgreSQL, MySQL, HTML, CSS
- Developed a full-stack web portal using Django backend and React.js frontend with TypeScript, enabling role-based access control for administrators and employees.

- Implemented secure authentication, responsive form components, and a PostgreSQL/MySQL database schema that reduced manual attendance errors and streamlined HR operations.

Task Management Application

- React.js, JavaScript, CSS, REST API
- Developed a responsive task management application with reusable React components.
- Implemented dynamic task creation, filtering, and status tracking features.
- Integrated REST APIs for real-time task updates and asynchronous data handling.
- Improved application usability through responsive design and optimized rendering.

AI-Powered Personal Assistant (JARVIS)

- Python, SpeechRecognition, NLP
- Built a voice-activated assistant using Python NLP libraries to parse and execute system commands, implementing robust error-handling that improved command recognition accuracy by 20%.

E-Commerce Frontend Web Application

- React.js, TypeScript, HTML5, CSS3
- Built modern UI pages including product listing, cart, and checkout workflows.
- Implemented component-based architecture for scalable frontend development.
- Used API integration and async/await for product data fetching.
- Ensured cross-browser compatibility and mobile responsiveness.

Automated Software Testing Framework

- Python, Selenium, PyTest
- Engineered a cross-browser automated UI testing framework validating login workflows, user interactions, and form functionality across Chrome, Firefox, and Edge.
- Generated structured HTML test reports with automated screenshot capture on failure, reducing average debugging time significantly and enabling faster CI/CD feedback loops.

ACHIEVEMENTS

- Strong understanding of frontend and backend fundamentals including component lifecycle, state management, and API handling.
- Built and deployed multiple frontend and full-stack projects using React and Python technologies.
- Continuously learning advanced frontend and backend engineering concepts and modern development practices.

SKILLS

Python · FastAPI · Django REST Framework · RESTful APIs · React.js · JavaScript · TypeScript · HTML · CSS · PostgreSQL · MongoDB · Selenium · PyTest · Software Development · Debugging · Performance Optimization · Scalability · Reliability · Cross-functional Collaboration · Documentation · Object-Oriented Programming (OOP) · JSON · Git · GitHub · Strimlit · Adobe Photoshop · Figma · Blender · Canva · Problem Solving · Team Management · CI/CD Principles · Cross-Browser UI · Responsive Design · OR-Tools CP-SAT · UI/UX · schema design · joins · indexing · PHP · C++ · SQL · JAVA · Node.JS · JQuery · HTTP protocols · status codes · request/response structures · No-SQL · Collaboration · Digital & AI Mindset · Technical Communication · logic · coding · system changes · AI · ML · Flask · .net

LANGUAGES

English (Fluent) · Hindi (Fluent) · Odia (Native)

HOBBIES & INTERESTS

Coding and Building Personal Projects · Learning New Technologies · Participating in Hackathons · Solving Coding Challenges · Reading Tech Blogs and Articles · Exploring AI and Machine Learning Tools · Open-Source Contributions · Playing Chess · Cooking · Listening to Music
